PROFESSIONAL SUMMARY

Software Engineer with 4 years of enterprise experience at General Motors, specializing in full-stack web application ownership, legacy system modernization, and multi-region production support. Proven track record owning mission-critical dealer-facing applications across North America, Latin America, and the Caribbean — including infrastructure migrations, production incident resolution, and cross-functional stakeholder communication. Bilingual (English/Spanish). Seeking a software engineering role in the greater Austin area.

WORK EXPERIENCE

Software Engineer | General Motors, Remote / Austin, TX (May 2022 – May 2026)

NAOWB – North America Order Workbench

- Modernized a dealer-facing order management platform serving thousands of dealers across the U.S., Canada, and Mexico — shipped to production in May 2023.
- Engineered a table customization widget enabling dealers to configure their own data views, reducing friction across a high-volume user base.
- Delivered bilingual (English/Spanish) localization support, ensuring accurate UI translations across all dealer-facing surfaces.

OVOFS – Central America & Caribbean Order Workbench | Application Owner

- Owned all production support, tech debt, and release communication for a regional dealer application serving Central America and the Caribbean.
- Led WebLogic-to-Kubernetes infrastructure migration, improving deployment reliability and setting the foundation for cloud-native operations.
- Initiated Oracle-to-PostgreSQL database migration; maintained steady progress until resources were reallocated due to company restructuring.
- Authored in-depth documentation for undiscovered failure scenarios, creating a durable knowledge base for future maintainers.

GDO – Brazil, Argentina & Andean Region Order Workbench | Supporting Engineer

- Revived a stalled enterprise application with no knowledge transfer after the prior team was dissolved — independently reconstructed deployment runbooks and restored production viability.
- Executed the first successful production deployment of GDO in over a year.
- Drove WebLogic-to-TomEE 7 server migration for both corporate and dealer environments; scoped and initiated follow-on TomEE 9 batch server upgrade.

SOPIA – Mexico Dealer Application | Alternate Application Owner

- Provided production support for a legacy dealer system (Java, C, SSMS), resolving data integrity issues and documenting recurring failure patterns for the primary owner.

Computer Support Assistant | UT Rio Grande Valley, Edinburg, TX (Sep 2018 – May 2022)

- Built an Excel-based inventory system to track hardware assets across multiple College of Engineering computer labs.
- Eliminated an account creation and permissions backlog by authoring self-service documentation — resolving a recurring bottleneck within weeks.
- Maintained lab environments across full hardware/software lifecycle: disk cloning, OS installs, hardware repairs, and configuration management.

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL, C++, C, Bash, HTML, CSS

Frameworks: Angular, Spring Boot

Infrastructure & Tools: TomEE, WebLogic, Kubernetes, Git, GitHub, Jira

Databases: Oracle DB, PostgreSQL, SSMS (SQL Server)

Other: Agile/Scrum, Technical Documentation, Bilingual English/Spanish

EDUCATION

B.S. Computer Science, Minor in Statistics Summer 2021

University of Texas Rio Grande Valley | Edinburg, TX | President's List: Spring 2020
